DETAILED ACTION

1. Claims 1-14 are pending.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Newman et al. (Pub No. 2003/0046572).

Regarding claims 1 and 8, Newman et al. discloses a method and program storage of internally encrypting data in a relational database, comprising the steps of: providing a security dictionary (DBENCRYPT package) comprising one or more security catalogs (DBENCRYPT_KEYS table) receiving the data from a user (See page 1, Section 0004 and page 2, Sections 0027-0030) associating the data with a database column and at least one authorized user, generating a working encryption key (data key), internally encrypting the working encryption key using a public key from an authorized user (See page 3, Sections 0031-0034)

storing the encrypted working key in a security catalog and using the working key to internally encrypt the data (See page 3, Section 0035)

Application/Control Number: 10/036,196

Art Unit: 2137

Regarding claims 2 and 9, Newman et al. discloses the claimed limitation wherein the step of generating a private key needed to decrypt the encrypted working key (See page 3, Section 0037)

Regarding claims 3 and 10, Newman et al. discloses the claimed limitation wherein the public key is a password and is used by the system to look up the private key (See page 3, Sections 0043-0050, page 4, Sections 0051-0059)

Regarding claims 4 and 11, Newman et al. discloses the claimed limitation wherein the step of associating the data with a database column and a user is accomplished with an extended SQL syntax and further comprises the step of creating a relational database object comprising:

the identity of the authorized user, (See page 4, Section 0064-0066) a relational database table, (See page, Section 0067)

the identity of column within the relational database table, and (See page 4, Section 0069)

one or more security flags the flags indicating user privileges to access the data (See page 4, Sections 0070-0071)

Regarding claims 5 and 12, Newman et al. discloses the claimed limitation wherein the working key is provided by the user (See page 3, Sections 0035-0036)

Regarding claims 6 and 13, Newman et al. discloses the claimed limitation wherein the working key is randomly generated (See page 2, Section 0019, page 3, Section 0034)

Application/Control Number: 10/036,196

page 5, Sections 0081-0089)

Art Unit: 2137

Regarding claims 7 and 14, Newman et al. discloses the claimed limitation wherein the steps of:

receiving a query and private key from a user,

checking the ownership of an encrypted column using the security catalog to verify the user is authorized,

internally decrypting the encrypted working encryption key with the private key, internally decrypting the encrypted column with the working key, processing the query, and returning an answer to the query to the user (See page 4, Sections 0072-0080,
